Global CAT Response Team

vrs»adjusters

Perhaps more than any other claims scenario, a global catastrophe requires not just a fast, experienced response: it also requires adjusters who can provide commitment, continuity and a complete understanding of the local market and conditions.

Servicing 141 countries and territories on six continents, the global vrs adjusters organisation offers unrivalled expertise and experience in providing the highest quality catastrophe response anywhere in the world, with a Global CAT Response Team, hand-picked for their specific skills and backed by specialist individuals, ready to act at a moment's notice.

Supplementing in-depth local knowledge, key personnel from around the world form the core of the vrs adjusters Global CAT Response Team. While local offices are well placed to deal with instructions from their own markets, the Team coordinates additional resources as required by insurers and multi-national corporate clients. This service is available to insurers and re-insurers alike, for whom we can act either as primary loss handlers or to protect other interests.

Home / Foreign

The vrs adjusters Global CAT Response Team is headed by Mike Weatherhead and five regional team leaders, supported by 40 highly skilled international adjusters particularly experienced in handling corporate claims for a broad range of multi-nationals. All have worked on a 'home-foreign' basis, co-ordinating the handling of losses abroad and using local adjusters where the value of a loss does not warrant the 'home-foreign' approach.

Such methodology ensures that service levels are maintained and loss levels managed, with all significant losses in the safe hands of experienced adjusters.

With vrs you get:

- Specialist cross-class commercial and corporate loss adjusting and claims related services
- Over 470 offices in 141 countries
- Local knowledge of customs, regulations and cultures combined with central control
- Home/foreign staff with wide experience of catastrophes and other major incidents
- 24/7 accessibility
- Reinforcement of your brand
- An intelligent web portal system enabling swift claims reporting, real time updates and the provision of management reporting and aggregate monitoring
- A commitment to consistently provide the best service in the industry.

Pro-active case management

vrs adjusters is firmly of the view that the longer a claim runs, the more it costs. Pro-active case management ensures effective progression of the claim and early agreement with the insured of a business recovery plan brings real benefits to all parties.

Tracking the loss

vrs ClaimView is the client portal of the custom vrs adjusters global claims platform. Fully compliant with all global security and data protection regulations, ClaimView is used to log each claim within a global programme, with MI reports being customised to the needs of individual clients.

A personalised, secure login for clients leads to a dedicated, customised area, where new claims can be assigned, open claims viewed and adjuster reports, claim documents and MI reports downloaded.

vrs ClaimView provides insurers with real time, online updates of all their claims worldwide, together with download facilities for claims data. There is also the facility for clients to enter into a written dialogue with the adjuster handling the loss.
